Pup-Grass® Care and Cleaning

- Pick up solid waste and dispose. Use a leaf blower, broom, or plastic rake to remove debris (Leaves, sticks, etc)
- Depending on use, rinse or flush the entire Pup-Grass area with water using a hose or sprinkler system. This will control odor and push urine through.
- An enzyme cleaner like Pup-Zymes™ should be used regularly to help combat odor. The turf fibers have antimicrobial properties and a topical spray will help reinforce odor and bacteria control.
- Pup-Fresh™ is an all-natural infill that neutralizes urine and will reduce urine odors by 90%.

The turf fibers have antimicrobial properties however, a topical spray will help reinforce odor and bacteria control.

- Clean up any spills, other than urine as they occur or found. Blot up spill with towels. Rinse area with water, use a mild cleaner or disinfectant, and flush with clean water.
- Harsh Chemicals and solvents will compromise the backing and cause the yarn to become loose and shed.

The use of Pup-Fresh™ an all-natural granular material will eliminate odor while preventing the grass from becoming matted. This is especially useful in kennel and dog runs.

- Broom regularly with a medium bristle broom to revitalize the fiber (and keep the infill level, if applicable). Apply infill, if necessary, with drop spreader and broom to level.
- If using infill replace as needed. If necessary, remove the infill with a shop vacuum
